Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 3, Application US/09933700 Patent No. 6528296 GENERAL INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

"Molecular cloning of the testicular follicle stimulating receptor of the non human primate Macaca fascicularis and identification of multiple transcripts in the testic.";
Biochem. Biophys. Res. Commun. 196:1066-1072(1993).

-I- FUNCTION: Receptor for follicle stimulating hormone. To this receptor is mediated by G proteins which active the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stimulation of the stim

SIMILARITY: Belongs to family 1 of G-protein coupl
FSH/LSH/TSH subfamily.
SIMILARITY: Contains 6 leucine-rich (LRR) repeats.

-i- CATALYTIC ACTIVITY: NADH + 2 Fe(3+) = NAD(+) + 2 Fe(2+)
-i- COFACTOR: FAD (Probable).

-i- SUBCELLULAR LOCATION: Integral membrane protein (Potent
-i- SIMILARITY: Belongs to the FRE / CYBB family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. -!- TISSUE SPECIFICITY: Sertoli cells and ovarian granulosa cells.
-!- DISBASE: Defects in FSHR are a cause of ovarian hyperstimulation syndrome (OHSS) [MIM:608115]. OHSS is a disorder which occurs either spontaneously or most often as an iatrogenic complication of ovarian stimulation treatments for in vitro fertilization. The clinical manifestations vary from abdominal distention and discomfort to potentially life-threatening, massive ovarian enlargement and capillary leak with fluid sequestration. Pathologic features of this syndrome include the presence of multiple serous and hemorrhagic follicular cysts lined by luteinized cells, a condition called hyperreactio luteinalis.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
-!- SIMILARITY: Contains 5 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright. "Porcine follicle-stimulating hormone receptor.";

Submitted (SEP-1997) to the EMBL/GenBank/DDBJ databases.
                                                                                                                                                                                                                                                                                                                                                                    adenylate cyclase.
-!- SUBCELULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupl
FSH/LSH/TSH subfamily.
-!- SIMILARITY: Contains 6 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=96011644; PubMed=7590277;

A Bourdeau J.E., Hughes M.R.;

"Cloning, genetic mapping, and expression analysis of a mouse renaingular contains of the mouse renaingular contains of the sodium-dependent phosphate cotransporter.";

L Am. J. Physiol. 268:F1038-F1045(1995).

C -!- PUNCTION: Important for the resorption of phosphate by the kidure of the renaingular membrane.

C -!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUB SPECIFICITY: Kidney.
                                                                                                                                                                                                                                                                                                                                                                                                                             CARBOHYD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     plastoquino1.
SIMILARITY: Belongs to the complex I 49 kDa subunit family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CATALYTIC ACTIVITY: NAD(P)H + plastoquinone = NAD(P)(+)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C. Natl. Acad. Sci. U.S.A. 96:10248-10253(1999).
FUNCTION: TRANSFER OF ELECTRONS FROM NADH TO THE RESPIRATORY
CHAIN. THE IMMEDIATE ELECTRON ACCEPTOR FOR THE ENZYME IS BELIEVED
TO BE PLASTOQUINONE. COMPONENT OF THE IRON-SULFUR (IP) FRAGMENT OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   THE ENZYME
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TOGEN
